Aims and scope
Interface is a new international journal publishing papers from the interface between the physical sciences, including mathematics, and the life sciences. It provides a high-quality forum to publish rapidly and interact across this boundary in two main ways: interface publishes research applying chemistry, engineering, materials science, mathematics and physics to the biological and medical sciences; it also highlights discoveries in the life sciences that allow advances in the physical sciences. Both sides of the interface are considered equally.

Guidance for authors

Articles
Articles are contributions up to 8000 words containing original scientific research.

Reports
Reports are short, letter-style contributions (up to 2500 words), which are published rapidly. Preliminary and more speculative work of high quality is strongly encouraged.

Both articles and reports should be written for audiences in a wide range of disciplines.

Reviews
Reviews are articles of the highest quality and aim to be of interest to communities working at the physical sciences–life sciences interface. Reviews cover the latest developments in an area of cross-disciplinary research. They put such research into a broader context and are written in a style that makes them accessible to readers in a wide range of disciplines. Reviews are normally published by invitation; however, we are also keen to receive proposals for prospective articles. Complete literature surveys are not encouraged.

Selection criteria
The review process will give equal weighting to sciences on both sides of the interface. The criteria for selection are scientific excellence, originality and potential interest to a wide spectrum of scientists. All papers are peer-reviewed to a high standard and published rapidly under the control of the Editor and his designated Editorial Board.

Objectives of The Royal Society are to

• recognise excellence in science
• support leading-edge scientific research and its applications
• stimulate international interaction
• further the role of science, engineering and technology in society
• promote the public's understanding of science
• provide independent authoritative advice on matters relating to science, engineering and technology
• encourage research into the history of science
• encourage research into the history of science
• encourage research into the history of science
• encourage research into the history of science
• encourage research into the history of science
• encourage research into the history of science

Research Support (UK grants and fellowships)
Research appointments: 2547
Research grants: 2539
Conference grants: 2540

Science Advice
General enquiries: 2583

Science Communication
General enquiries: 2572

International Exchanges (for grants enabling research visits between the UK and most other countries (except the USA))
General enquiries: 2555

Library and Information Services
Library/archival enquiries: 2606
