

## Research articles

- Connectivity sustains disease transmission in environments with low potential for endemicity: modelling schistosomiasis with hydrologic and social connectivities** 495  
D. Gurarie & E. Y. W. Seto
- Improving the realism of deterministic multi-strain models: implications for modelling influenza A** 509  
P. Minayev & N. Ferguson
- Arterial geometry, flow pattern, wall shear and mass transport: potential physiological significance** 519  
G. Coppola & C. Caro
- Pre-tension generates strongly reversible adhesion of a spatula pad on substrate** 529  
B. Chen, P. Wu & H. Gao
- Effect of Reynolds number and flow division on patterns of haemodynamic wall shear stress near branch points in the descending thoracic aorta** 539  
A. Kazakidi, S. J. Sherwin & P. D. Weinberg
- Motions of the running horse and cheetah revisited: fundamental mechanics of the transverse and rotary gallop** 549  
J. E. A. Bertram & A. Gutmann
- Elastic coupling of limb joints enables faster bipedal walking** 561  
J. C. Dean & A. D. Kuo
- Corrections**
- Predicting infection risk of airborne foot-and-mouth disease** 574  
D. Schley, L. Burgin & J. Gloster

Founded in 1660, the Royal Society is the independent scientific academy of the UK, dedicated to promoting excellence in science

Registered Charity No 207043
