AIMS AND SCOPE
Interface is a new international journal publishing papers from the interface between the physical sciences, including mathematics, and the life sciences. It provides a high-quality forum to publish rapidly and interact across this boundary in two main ways: Interface publishing research applying chemistry, engineering, materials science, mathematics and physics to the biological and medical sciences. It also highlights discoveries in the life sciences that allow advances in the physical sciences. Both sides of the interface are considered equally.

GUIDANCE FOR AUTHORS

Articles
Articles are contributions up to 8000 words containing original scientific research.

Reports
Reports are short, letter-style contributions (up to 2500 words), which are published rapidly. Preliminary and more speculative work of high quality is strongly encouraged.

Both articles and reports should be written for audiences in a wide range of disciplines.

Reviews
Reviews are articles of the highest quality and aim to be of interest to communities working at the physical sciences-life sciences interface. Reviews cover the latest developments in an area of cross-disciplinary research. They put such research into a broader context and are written in a style that makes them accessible to readers in a wide range of disciplines. Reviews are normally published by invitation; however, we are also keen to receive proposals for prospective articles. Complete literature surveys are not encouraged.

Selection criteria
The review process will give equal weighting to sciences on both sides of the interface. The criteria for selection are scientific excellence, originality and potential interest to a wide spectrum of scientists. All papers are peer-reviewed to a high standard and published rapidly under the control of the Editor and his distinguished Editorial Board.

For further information on the Society’s activities, please contact the following departments on the extensions listed by dialing +44 (0)20 7839 5561, or visit the Royal Society’s Web site (royalsociety.org).

Research Support
UK grants and fellowships
Research Appointment (Fellowships): 2542
Research Grants: 2223
International travel Grants: 2555
Newton International Fellowships: 2559
Science Policy Centre
General enquiries: 2550
Science Communication
General enquiries: 2573
Library and Information Services
Library/archives enquiries: 2600

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific progress. We support many top young scientists, engineers and technologists, encourage science policy, debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Foreign Members.

Our mission: to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society’s strategic priorities are to:

• invest in future scientific leaders and in innovation,
• influence policymaking with the best scientific evidence,
• inegrate science and mathematics education,
• increase access to the best science internationally, and
• inspire an interest in the joy, wonder and excitement of scientific discovery.
